

CDR-X110

11 Gbps Optical and Electrical Clock/Data Recovery System

Overview

The OPTELLENT CDR-X110 is a cost-effective, easy-to-use clock-and-data recovery system for testing components and systems in R&D and manufacturing environments. It incorporates a reference frequency source, electrical and optical input ports and clock recovery circuits in one compact module that operates between 9.5 and 11.5 Gb/s. The CDR-X110 is offered with either preset discrete data rates or with a continuously variable data rate (2kHz step size).

An optional Graphical User Interface enables easy point-and-click operation. The Optellent CDR-X110 software runs on Windows 98/2000/NT/XP and VISTA over USB or RS-232 serial interface via an RJ-45 Connector provided on the front panel.

Applications

- ▶ Testing of optical transceivers, transponders, linecards, and subsystems
- ▶ Testing of opto-electronic components and devices (TOSA, ROSA, lasers, etc...)
- ▶ Fibre optic testing (sensitivity, dispersion penalty)
- ▶ Testing of Gb/s ICs, electronic modules, subsystems, and systems
- ▶ Serial high-speed backplane and board design

Key Features

- ▶ Differential Data and Clock Outputs
- ▶ Electrical and/or Optical Interfaces
- ▶ Preset / Variable data rates
- ▶ Trigger output for oscilloscopes
